</table>

a) Main objectives

**Overall objective:**
Reduce morbidity and mortality, the development of diabetes-related health complications and mortality in the three islands of the Union of the Comoros

b) Anticipated results

- Result 1: Increased understanding of civil society regarding diabetes, its risk factors and its effects
- Result 2: Increased awareness of health professionals on all three islands to identify and regulate diabetes (in adults, children and pregnant women), as well as preventing and managing potential complications (e.g. diabetic foot)
- Result 3: Increased access for people with diabetes to anti-diabetic drugs at all levels of management
- Result 4: Increased number of people with diabetes, through associations, gaining access to quality care, defending their rights and thus reducing the social and economic impact of diabetes
- Result 5: Increased government policies relating to diabetes
c) Main partners

In order to carry out its actions successfully, the organisation Santé Diabète has managed to cooperate with major partners both nationally and internationally, effectively assuming, therefore, the projects being carried out:

- Local Civil Society Organisations

  Associations of people with diabetes; associations of health professionals; community associations

- Centralised and decentralised national partners

  The Ministry of Health; national hospitals; the Ministry of Education

- Academic associates, scientific and international partners

  WHO
